Develop shared understanding and empathy

Develop shared understanding and empathy

Summarize the data you have gathered related to the people that are impacted by your work. It will help you generate ideas, prioritize features, or discuss decisions.

Change incandescent light bulbs

Stop burning fossil fuels

Low vehicle usage

CO2 emission causes global warming

8th rank for carbon emission of India

Carbondioxide emits more heat to earth

Grow more plants and trees

Bring reusable shopping bags and avoid products with excessive plastic packaging

Use eco-friendly products

GOAL!

TO REDUCE A GLOBAL CO2 EMISSION ANALYSIS

Switch to green energy

Reducing forest loss will reduce carbon emissions

Reduce electricity usage of non-renewable resources

More abundant vegetation from increased CO2 is already apparent

C02 is an important greenhouse gas that helps to trap heat in our atmosphere

Green plants grow with more CO2

Switch to an electric vehicle

Changing lifestyle from city to village

Amount of poisonous substance released by factories can be reduced by applying a cloth in the chimneys of the factories that absorbs smog and other particles

Switch to clean energy

Install solar panels on your roof to generate energy for your home

Reduce the use of refrigerator instead we can use canning method to preserve the food items

Greenhouse gas emissions can be reduced by making power on-site with renewables and other climate-friendly energy resources

Human activities release more C02 into the earth atmosphere

Use wind and solar energy to reduce C02 emissions

The best ways to reduce carbondioxide is to minimise the use of vehicles unneccessarily

Industrialization and urbanization are compound factors affecting carbon emissions

Carbondioxide is largely responsible for climate change
